> About CLS

CLS is a Dutch manufacturer of high-quality LED lighting solutions. With **more than 35 years of experience** in professional lighting, and 20 years dedicated to LED production, we are a trusted partner for the demands of today's market. Our fixtures provide the perfect solution for every project, thanks to tailor-made configurations and the use of the very best components available.

One of CLS's specialisations is the development and production of lighting for churches and religious buildings worldwide. We collaborate with leading architects and lighting designers to achieve the very best results. In addition, we work closely with renowned installers who understand the specific requirements and installation conditions unique to these buildings.

Churches have faced the challenging task of adapting to changing circumstances for several years now. We are pleased to support you in your ambition to illuminate your church to the highest standard. What we offer:

> High-quality fixtures

With a high effective light output, significantly improving light levels and making it easier for elderly visitors to read religious literature once again.

Increasing the effective amount of light can also be essential in considerably enhancing the quality of video recordings, allowing those who follow live-streamed services to enjoy clear, well-defined images.

> Simple control

CLS fixtures can be dimmed with ease, without the need for costly new cabling systems or complex control equipment. Our lighting can be dimmed wirelessly via the freely available Casambi app, accessible on iPhone, iPad, Android devices, or through a simple, user-friendly wall-mounted unit.

This makes one-to-one replacement of existing fixtures entirely possible. Furthermore, CLS fixtures can be seamlessly integrated with your church building's existing control systems.

> Lighting for churches

> Additional applications

LED lighting also offers the opportunity to make your building suitable for hosting events, enabling truly multifunctional use. We have developed a range of fixtures specifically for churches and religious buildings, allowing you to create both functional white light and atmospheric coloured light with a single fixture.

> Bespoke solutions

If the right solution does not yet exist, we have the expertise and flexibility to create one tailored precisely to your requirements. We have designed and manufactured bespoke solutions for a number of churches throughout the Netherlands. This is made possible by the fact that we develop and produce everything in-house. CLS and its partners are pleased to engage with you to explore how your specific needs can be fulfilled, contributing to the preservation of valuable cultural heritage.
