1. Place the magnet on the backplate, at the indicated spot.
2. The Revo XXL starts slowly dimming from 100 – 1% in approx. 30 seconds. The dimming is very accurate and precise, so steps are very small.
3. At the desired intensity level, take away the magnet.
4. After 10 seconds the Revo XXL flashes one time, the value has been stored on the internal memory.
5. When powering up the Revo XXL, the stored value will be recalled from the internal memory.
6. If you want to have a lower value, replace the magnet and the Revo XXL dims further to lower levels. To store the new setting repeat step 3 – 5.
7. If the Revo XXL is being dimmed to Level 0 and you have not programmed a value, it will automatically start at Level 100 and dim back from 100 – 1%.
